

RANZCO Museum

The Museum exhibit at RANZCO 2017 owes its success to the magnificent collection provided by Prof Ian McAllister with displays including the evolution of the ophthalmoscope, optometers and C19 teaching.

The exhibit included a Knapp Ophthalmotrope, an ingenious model for demonstrating eye movements.

Ivory and bone The RANZCO museum has a collection of ivory handled instruments made by master cutlers of the mid 19th century, sterilised by soaking in Listerian carbolic acid.
